The natural prevention of heart attacks, strokes, high blood pressure, diabetes, high cholesterol and many other cardiovascular conditions

This book documents one of the most significant medical breakthroughs ever made in human health. The magnitude of Dr. Rath's breakthrough has given him the courage to challenge the largest investment industry on earth - the pharmaceutical industry and its trillion dollar "business with disease". This book also answers some of today's most burning political questions:

Why does the current 400 billion dollar "prescription drug benefit" only cover symptom-oriented, patentable pharmaceutical drugs with harmful side effects - but rejects coverage of effective, safe and affordable natural therapies?

Why has there been a sustained international effort on behalf of global drug companies to outlaw natural, non-patentable natural therapies worldwide by abusing the United Nation's "Codex Alimentarius Commission"?

Why is the US administration attempting to reverse one of the greatest civil liberties achieved by the American people in past decades - the right to free access to natural health as guaranteed by the DSHEA Act of 1994?

The continued existence of the pharmaceutical industry depends on its suppression of the medical discoveries documented in Why Animals Don't Get Heart Attacks - But People Do! If we, the people of the world, want to end

Foreword. Table Of Contents Foreword. Download this chapter (PDF-File, kB ). Introduction. The Mission to Eradicate Heart Disease. In Why Animals Don't Get Heart Attacks, But People Do, Matthias Rath, M.D., an internationally respected cardiovascular researcher, asserts that high.
